

Sample#1

 Sample ID: BIA250710S0003
 Strain: Lemon Cherry Gelato

 Produced:
 Collected:
 Received: 07/10/2025
 Completed: 07/16/2025
 Batch#:

 Client
Bushy Beard Cultivation
 Lic. # CLTV0105
 601 Sias Ave
 Newport, VT 05855

 Matrix: Plant
 Type: Flower - Cured
 Sample Size: 10.71 g
 Lot#:

Summary

Test	Date Tested	Result
Sample		Complete
Cannabinoids	07/15/2025	Complete
Moisture	07/14/2025	9.40% - Complete
Water Activity	07/14/2025	0.454 aw - Complete

Cannabinoids Methodology: High Performance Liquid Chromatography (HPLC) using PerkinElmer FLEXAR™ with Photo Diode Array Detector (PDA)

Total CBD and total THC are calculated values, to account for assumed decarboxylation from the acid form (THCA or CBDA) to the neutral form, causing weight loss of the acid group. These values are calculated as follows:

$$\text{Total THC} = (\text{THCA} \times 0.877) + \Delta 9\text{-THC}$$

$$\text{Total CBD} = (\text{CBDA} \times 0.877) + \text{CBD Reagent}$$

Blanks: < LOQs for all analytes

LOQ = The lowest quantity that this method can reliably detect. Any cannabinoid that was not detected is assumed to be less than the stated LOQ (<LOQ).

All results reflect dry weight of material, based on % moisture of the sample.

Measurement of Uncertainty (MU): the parameter, associated with the result of a measurement, that characterizes the dispersion of the values that could reasonably be attributed to the

particular quantity subject to measurement. Δ9-THC MU = ±0.005% Total THC MU = ±0.007%

All other cannabinoid MU values are available upon request.

All moisture and water activity analysis is determined by dewpoint measurement using an AQUALAB water activity meter.

*The result is the sum of delta-10 isomers.
